LOVABLE IMPLEMENTATION BRIEF

A distinctive homepage for a children's online school

DESIGN SYNTHESIS / EXACT-COPY PROTECTION / HOMEPAGE-ONLY SCOPE

This document is a build-ready creative and technical instruction set for Lovable. It establishes what to build, how to interpret the uploaded design references, how to preserve the school's actual copy, and what not to create.

IMPORTANT CONTENT STATUS

The current supplied materials contain two design-system Markdown files and three visual inspiration images. They do **not** contain the separate school landing-page copy/brief. Consequently, no school name, headline, paragraphs, programme descriptions, testimonials, statistics, pricing, labels or calls to action are asserted or invented in this PDF. Lovable must receive the copy document as an additional attachment before building substantive page content.

Success definition

- A carefully art-directed, fully responsive **single homepage** that feels credible to parents and inviting to children.
- A visual design synthesized across the images and Markdown files, not a clone of any reference.
- Every visible word that describes the school comes from the user-provided landing-page copy; no AI-generated marketing claims.
- A polished static frontend with appropriate responsive behavior, without backend, authentication, payments, dashboards or unrequested workflows.

Materials to provide together

- This PDF: **Lovable_Online_School_Homepage_Build_Brief.pdf**.
- The **separate, authoritative school landing-page copy** (required; not among the files reviewed).
- **DESIGN (1).md** - Quizlet style analysis.
- **DESIGN (2).md** - SuperHi style analysis.
- All three reference JPG files and any actual school photographs, logos, illustrations or other supplied assets.

1. Product, audience and strict implementation scope

Build the public-facing **homepage of an online school for children**. The site should communicate the school's purpose using only the submitted copy. Its visual presentation should be appealing to parents/guardians while retaining a joyful, age-appropriate sense of discovery for children.

What to implement

- One complete responsive homepage at ***/***.
- A visually refined top navigation, hero and additional homepage sections **only where supported by the authoritative copy**.
- Static content cards, images, decorative shapes, editorial layouts and clear visual hierarchy as appropriate to the supplied sections.
- Working in-page anchor navigation only for sections that really exist; user-provided external URLs only when supplied.
- Responsive desktop, tablet and mobile layouts with accessible, usable buttons and links.

What NOT to implement

- No extra pages or routes, no portals, parent dashboard, student dashboard, lesson platform, LMS, profile pages, course-detail pages or search experience.
- No login/signup system, database, CMS, payment processing, registration submissions, booking calendar, chat, newsletters, or artificial interactivity.
- No placeholder testimonials, fabricated ratings, statistics, accreditations, fees, staff biographies, claims of outcomes, invented programme names or fictitious customer photos.
- Do not create additional homepage sections merely because the inspiration screenshots contain them.

Handling buttons and navigation

Preserve CTA wording **exactly** as supplied in the school copy. Connect a CTA only to a valid URL or actual in-page anchor provided or permitted by the content. If the destination is missing, do not fabricate a route or working signup process: leave a clearly identified implementation note in code and present a non-deceptive static treatment until the destination is supplied. Likewise omit unsupported menu items instead of inventing them.

2. First analyze all references - then synthesize

Before coding, inspect **every supplied JPG and both Markdown files in full**. These sources are inputs for visual direction, not content and not blueprints to replicate. Extract recurring visual principles, compare differences and resolve tensions into one coherent art direction.

Reference-by-reference interpretation

- **InsightPod JPGs:** learn from the spacious cream/white canvas, bold editorial headline, asymmetric hero, colourful photo tiles, staggered image cards, soft playful motifs and well-paced sections. Do not reuse the podcast copy, people, show cards or podcast functionality.
- **New School JPG:** learn from the dramatic split hero, strong contrast, playful floating portrait columns, tall capsule-shaped media masks, vibrant accents and high-impact navigation/CTA placement. Do not reproduce the exact layout or school-specific text.
- **DESIGN (2).md - SuperHi:** learn from the near-white/pale-blue surfaces, expressive paper-cut geometry, chunky pill buttons, accessible clear typography, playful flat cutouts and strong negative space. Use the shapes intentionally, not as indiscriminate decoration.
- **DESIGN (1).md - Quizlet:** learn from its calm educational framing, restrained interface chrome, clear card hierarchy, soft section washes, geometric sans-serif lettering, consistent spacing and accessible interaction patterns. Do not turn the site into a Quizlet clone or build flashcard functionality.

Relationship across all references

Shared DNA: approachable geometric typography; a strong headline contrasted against a visual composition; neutral or quiet surfaces anchoring lively colourful accents; image and card groupings with rounded geometry; generous breathing room; clear and limited CTA hierarchy; modular sections with a recognizable rhythm. The common language is **structured playfulness**: expressive, never chaotic.

How to make it genuinely original

Combine, rather than stack, ideas: pair the InsightPod editorial pacing with a New School-inspired hero silhouette; apply SuperHi's restrained paper-cut shapes as a brand accent; use Quizlet's usability and card discipline for the content below. Recompose image positions, alter card proportions and create a distinct visual rhythm. No pixel-perfect recreation, no fixed design lifted from a single reference.

3. Recommended visual architecture

These are **design recommendations, not factual school content**. If official school branding is supplied, it takes precedence over all suggested colours, typography and visual styling.

Overall expression

- Mood: imaginative, contemporary, warm, trustworthy, energetic without looking infantile.
- Preferred foundation: warm off-white/white or light blue-tinted surfaces for readability, with optional high-contrast hero panel. Avoid making every section dark or multi-coloured.
- Use one dominant interactive colour consistently; reserve yellow, coral, green, pink and sky blue as carefully selected visual accents. Reference palette examples are inspiration, not automatically the school's brand colours.
- Suggested type family if none supplied: **Inter** or **Manrope**, with a friendly, large display scale and readable 16-18px body copy. Preserve supplied font assets if available.
- Create rounded rectangular cards and occasional tall pill/arch image masks. Use a coherent radius system (~20-28px for cards, full pills for CTAs) and restrained elevation.
- Use real provided imagery if available. Never assume a stock photo is an actual school student, teacher or parent.

Hero composition

Consider a desktop two-column composition: left contains the exact supplied hero copy and CTA(s), right holds an original multi-layer portrait/illustration arrangement built with tall arched or pill-shaped frames, offset cards and subtle cutout motifs. Keep the text commanding and allow generous whitespace. On mobile, stack copy above imagery, keep the CTA visible and simplify overlapping visual elements.

Page rhythm

Follow the section order in the authoritative copy. Alternate airy editorial blocks, white-on-tint cards and occasional highlighted feature bands **only for sections that exist in the brief**. Use grid patterns that adapt from 3 or 4 columns to 2 and then 1; do not force an equal grid on every section. Do not introduce fake social proof to fill space.

Motion and interaction

Use subtle entrance transitions or light hover response where helpful; support **prefers-reduced-motion**. Avoid auto-playing audio, distracting loops, fake carousels or nonfunctional interactive controls. Any motion should reinforce clarity rather than create a flashy template appearance.

4. Exact-copy contract: non-negotiable

The user's dedicated landing-page content document is the **sole source of truth** for the homepage's words. The design Markdown files and screenshots are never permitted sources for school copy.

- Read the content document and identify the portion labelled or clearly belonging to **landing-page/homepage content**.
- **Exclude the introductory portion discussing how to build a website or the website-building process.** It is background/process material, not page copy.
- Preserve the complete landing-page content verbatim: spelling, punctuation, capitalization, section names, CTA labels, numbers, names, links and intended ordering.
- Do not summarize, paraphrase, condense, rewrite, embellish, split a sentence into new marketing claims, or add transitional subheads.
- Do not bring visible wording from the inspiration images, reference design Markdown files or the examples in this PDF into the school homepage.
- You may use invisible programmatic labels, internal component names and descriptive alt text for accessibility; do not add unsupported visible marketing content.
- If content is too long for a particular design, redesign the layout rather than shortening the text.
- If copy is ambiguous, conflicting or missing, report the exact issue and request the authoritative text, rather than guessing.

Required content extraction check

Before implementation, produce an internal content inventory (section order, heading, body paragraphs, bullet points, buttons, associated supplied images/links). Compare the rendered page with that inventory after implementation. The text must match **character-for-character** except for non-visible technical markup and whitespace introduced purely by responsive line-wrapping.

> **NO CONTENT HAS BEEN FABRICATED FOR THIS BRIEF**
>
> The actual school landing-page copy is not present in the provided two .md files or three reference screenshots. Therefore this PDF does not pretend to quote it. Attach the source copy before asking Lovable to render the final school homepage.

5. Asset handling and file priority

Priority order

- **1 - School homepage copy:** controls visible page content, ordering and factual claims.
- **2 - Actual school brand/logo/image assets:** control brand identity and authentic imagery.
- **3 - Design reference Markdown files:** inform design tokens, scale, component treatments and constraints, subject to synthesis.
- **4 - Inspiration screenshots:** inform layout character, art direction, hierarchy and composition, not copy or identity.
- **5 - This PDF:** controls scope, interpretation process and implementation quality.

Specific supplied reference filenames

- DESIGN (1).md - Quizlet style reference
- DESIGN (2).md - SuperHi style reference
- Education Website Landing Page - Sajjad Rafi(1).jpg - New School visual reference
- InsightPod - podcast landing page (two uploaded JPG references) - editorial landing-page composition references

Images and responsive crops

Inspect every provided photograph or graphic before choosing placement. Preserve subject integrity and avoid awkward face crops. Use object-fit/object-position intentionally. All non-decorative images must have appropriate alt text. Decorative art should be hidden from assistive technologies. If suitable assets are not supplied, do not pretend that inspiration image people are the school's own students; raise the missing-asset question instead.

Conflict resolution

Where SuperHi favours sharp flat cutouts and hard offset shadows but Quizlet favours restrained interface and soft shadows, resolve by using flat decorative shapes but restrained, subtle shadows on content surfaces. Where New School is dark and InsightPod is cream, choose one carefully controlled high-contrast zone with mostly light reading surfaces, unless actual brand direction says otherwise. Avoid combining all colours and component variants at once.

6. Frontend build instructions

- Use the project's standard Lovable React/TypeScript frontend stack and clean reusable components. A single route is sufficient.
- Keep content in a clearly structured data source or components so exact-copy auditing is easy.
- Use semantic HTML landmarks, one H1, logical heading order, real button/link semantics, keyboard focus states and accessible colour contrast.
- Build mobile-first responsive breakpoints; verify at approximately 375px, 768px, 1024px and 1440px. Prevent horizontal scrolling, clipped CTA text, overflowing cards and image overlaps.
- Ensure assets are optimized, sized responsibly and not loaded as unnecessarily huge images.
- Avoid unnecessary libraries, network-dependent widgets, backends, APIs and artificial form submissions.

7. Final validation - definition of done

- **Scope:** exactly one homepage; no fabricated secondary pages or functional systems.
- **Copy:** every user-supplied homepage section represented with all words and numbers unchanged; process-oriented material excluded.
- **Design:** demonstrably synthesizes at least three source influences without recreating any screenshot.
- **Assets:** all actual school assets represented accurately; no reference imagery misrepresented as authentic school people.
- **UX:** readable, responsive, clear navigation, meaningful visible buttons, no broken or misleading actions.
- **Accessibility:** semantic structure, alt text, contrast, keyboard focus and motion preferences addressed.
- **Polish:** consistent typography, deliberate spacing, clean media crops, coherent accent use and no template-like filler.

8. Copy-paste implementation directive for Lovable

Use the following as the first chat instruction to accompany this PDF and the source materials. It repeats the highest-priority rules in a concise operational format.

PRIMARY BUILD INSTRUCTION

Build only the responsive homepage for my children's online school. First review the attached PDF, the separate original landing-page copy document, both .md design reference files and every design inspiration image. Analyze their shared visual grammar, layout architecture, spacing, shapes, colours, typography and imagery. Design something original by intelligently combining complementary ideas across the references, not by cloning a screenshot. The separate landing-page copy document is the ONLY authority for text: exclude its introductory website-building/process section, and preserve the remaining homepage content EXACTLY with no additions, omissions, rewrites or invented claims. Do not implement any additional pages, signup system, dashboard, payments, search or backend functionality. Build a polished, responsive, accessible static frontend. Before coding, confirm which source is the exact copy document; if it is absent, do not invent the site copy - identify that blocker. After implementation, self-audit copy fidelity, reference synthesis, responsive design and the homepage-only scope.

9. Delivery note

The school's actual landing-page content document still needs to be attached. Once provided, its exact sections can be inserted into a revised copy-inclusive PDF, without changing this design strategy. Until then this document is a comprehensive execution brief, but not a substitute for the missing copy.
